

IntelliTrack is a software solution from WASP Technologies that allows for the tracking and control of bar coded assets within your organisation.

About IntelliTrack

Designed to run on both Windows Mobile and Palm™ Computing platforms, IntelliTrack integrates the handheld computer into its own backend database to provide your organisation with a clear and accurate picture of its asset register at any particular point in time.

IntelliTrack achieves this integration either wirelessly or through the use of a cable attached to your PC. When assets are received into stock, they are scanned on a handheld device

and all details associated with the receipt are recorded (date, value, type of asset etc). When the handheld is synchronised with your desktop, these details are transferred into your asset register database. The same procedure is used for the issuing of assets, the disposal of assets, the stocktaking of assets and the transferring of assets from location to location.

IntelliTrack can produce barcode labels matching your pre-built design, or alternatively can use the manufacturer's barcode present on most assets. The handheld computer gives the flexibility of remotely updating the asset register database via a wireless connection (WiFi/3G/GPRS), allowing tight control over assets based at multiple locations.

IntelliTrack comes with a comprehensive suite of reports, providing your organisation with immediate access to the asset values, locations, depreciation, disposals etc.

Key Features

- Generation of barcode labels
- All transactions can be carried out on handheld device or through desktop application.
- Assets Received against Purchase Orders for historical tracking
- Assets Issued to Divisions/Locations/Individuals
- Disposal of Assets
- Transfer of Assets
- Stocktaking of Assets
- System lookup tables maintained on the desktop
- Comprehensive suite of reports
- Multi User Application
- Satisfies Audit Requirements

About WASP Technologies

WASP Technologies have been delivering mobile solutions to some of Europe's largest companies since 1999. We leverage our INTELLISYNC platform to develop and deploy synchronisation and mobile data connectivity solutions for enterprise clients.

Our clients include Diageo, Nestle, GlaxoSmithKline, PCI, An Post, Aer Lingus, McNeil Nutritionals, SHS Group, Grafton Group, Richmond Marketing and Boyne Valley Foods.

WASP Technologies, Unit 14, Penrose Wharf, Cork, Ireland.
